Staff Assignments:

John Mueller, P.L.S. – Project Leader

Project Scope:

This project involved the urban bridge rehabilitation of Structure P-09-0711: a single span concrete arch bridge on Spring Street over Duncan Creek in the City of Chippewa Falls. Extensive coordination with local and state historical agencies was required to complete the project while maintaining the historical appearance of the structure.

Major items of work included asphaltic surface, concrete curb and gutter, concrete sidewalk, concrete surface repair, removal of concrete masonry overlay, concrete masonry overlay, fiber wrap reinforcing, concrete staining of the structure and all incidentals. Services provided were construction inspection, materials sampling, measurement of quantities, project record keeping, and the completion of project finals.
